

Christopher Hudalla, 1984-88, Associates Degree

Years Attended: 1984-88

Area of Study: Associated Degree

Email: chirt1@aol.com

I received a PhD in Chemistry from the University of California in Santa Barbara, and spent 2 years living and working in Germany, teaching at a German university.

I returned to the US for a position at the University of Nebraska Medical Center, doing cancer research. Currently I am doing Research and Development for an Analytical Instrumentation Company called Waters Corporation, where I have been employed since 2000.

YC Professor Rod Barkhurst got me interested in Chemistry, which resulted in a major directional change for my education and life, in general.

I spend my free time in Ecuador, working with the non-profit organization "Hands for Humanity", bringing health and human services to people in need.
